

PMP CORE BANK PLAN

Our Core Bank Plan...short and simple:

1. You send us as many cores as you intend to have remanufactured within one year. These can be mechanical computers, meters, valves, pumping units, printers, cash drawers, vapor recovery pumps and motors, electric resets, pulsers, ticket printers and registers or any other product remanufactured by PMP.
2. You order items from your core bank as you need them. We will always first utilize your core that will cost you the least.

The benefits to you are:

1. Shorter turn-around time. Once you have a PMP core bank, we can process your orders for those immediately rather than having to wait for the time it takes a core shipment to get to us.
2. You gain space by not having to store cores.
3. You can reduce freight charges by making larger shipments at reduced rates. When a shipment is over 300 lbs., we will pay the freight. See our Freight Plan (page 8) for more details.

Our Core Bank is designed to help you. Please contact us for more information or if you have any questions on how the PMP core bank works. You may request a copy of your core bank contents at any time.

Obsolete Cores

Over time, certain products in the PMP Core Bank become obsolete. Additionally, an individual account may accumulate more cores of a particular type than they rarely order. Warehousing obsolete and excess cores is expensive. If you have cores in your core bank for products that you have not ordered in over 2 years, PMP reserves the right to dispose of those cores. If PMP needs to reduce your core bank balance for any other reason, we will contact you to discuss either disposing of the cores or shipping them back to you at your expense.
