Subject: Mechanical Computers - that price over \$3 per gallon

PMP has been inundated with calls about what options are available that will allow continued use of mechanical computers with the increasing price of gasoline.

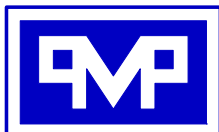

You need to consider the application and the equipment presently installed.

1. Typical Service Station for Fueling Cars

- a. If the computer is a VR 2002E or a PMP 4203 and used in a typical service station for fueling cars in which the average sale is less than 25 gallons the quick and economical way is to use the PMP 3.999 Gear Kit.
Order PMP # 81010. This kit will allow these mechanical computers to price from 3.000 to 3.999 per gallon. Request instructions from PMP via fax or visit our website www.pmp-corp.com
- b. If you have a VR-10/4 computer, it will price to \$3.999 per gallon by rearranging gears. Request instructions from PMP via fax or visit our website.
- c. If you have a PMP Model 4005, it will price to \$4.999 per gallon. For use if the typical sale is less than 20 gallons because the maximum sale is \$99.99

2. Marinas, Truck Stops or Racetracks

- a. If you have one of the models listed above, you may be able to temporarily do one of the steps outlined above.
- b. However, if the typical sale exceeds \$100 most Weights and Measures jurisdictions require a device that displays the full sale price. For mechanical computers, this requires a VR-10 computer. It will price up to \$9.99 per gallon and has maximum sale of \$999.98. Note: From \$0.00 to \$5.999 it prices in 1/10-cent increments. This is accomplished by rearranging gears. Request instructions from PMP via fax or visit our website www.pmp-corp.com
- c. PMP can convert your VR-10/4 to a VR-10 for our standard remanufacturing price.
- d. If you are upgrading to a VR-10 you need to consider:
 - Whether a different pulser is required
 - How to provide larger openings on the faceplates for two wheels
